

Dental Providers' Role in Administering COVID-19 Vaccines and Boosters

Study Design

- Surveyed DentaQuest network of providers in March 2021.
- Analyzed dental providers' willingness to administer the COVID-19 vaccine and subsequent boosters.

Results

- 49% of dental providers said they were either offering the COVID-19 vaccine to patients or were interested in doing so.
- Dental providers in public health settings were 10 times more likely to be offering COVID-19 vaccines than providers in private practice.

Conclusion

- Dental offices can be important access points for certain annual preventive services, including vaccines and booster shots.
