

# SUSTAINABLE PATHWAYS TO PATIENT-CENTERED DENTAL CARE

Teledentistry is a great option to provide access to oral health care to patients, especially during the COVID-19 pandemic.

Teledentistry utilizes technology to mitigate risk and manage health services to support and engage patients by providing/offering a safe mode of diagnosis, triage, and aiding the patient in navigating care pathways. This workflow demonstrates how teledentistry is not an “all or nothing” approach, and can be used in conjunction with in-office care. This workflow, and the resources within it, should provide dental practices help with finding operational efficiencies to support lasting use of teledentistry as a communication tool within care processes.

**In-office** or **via teledentistry**

Generally **In-office**  
(but can be done via teledentistry)

Generally **via teledentistry**  
(but can be done in-office)

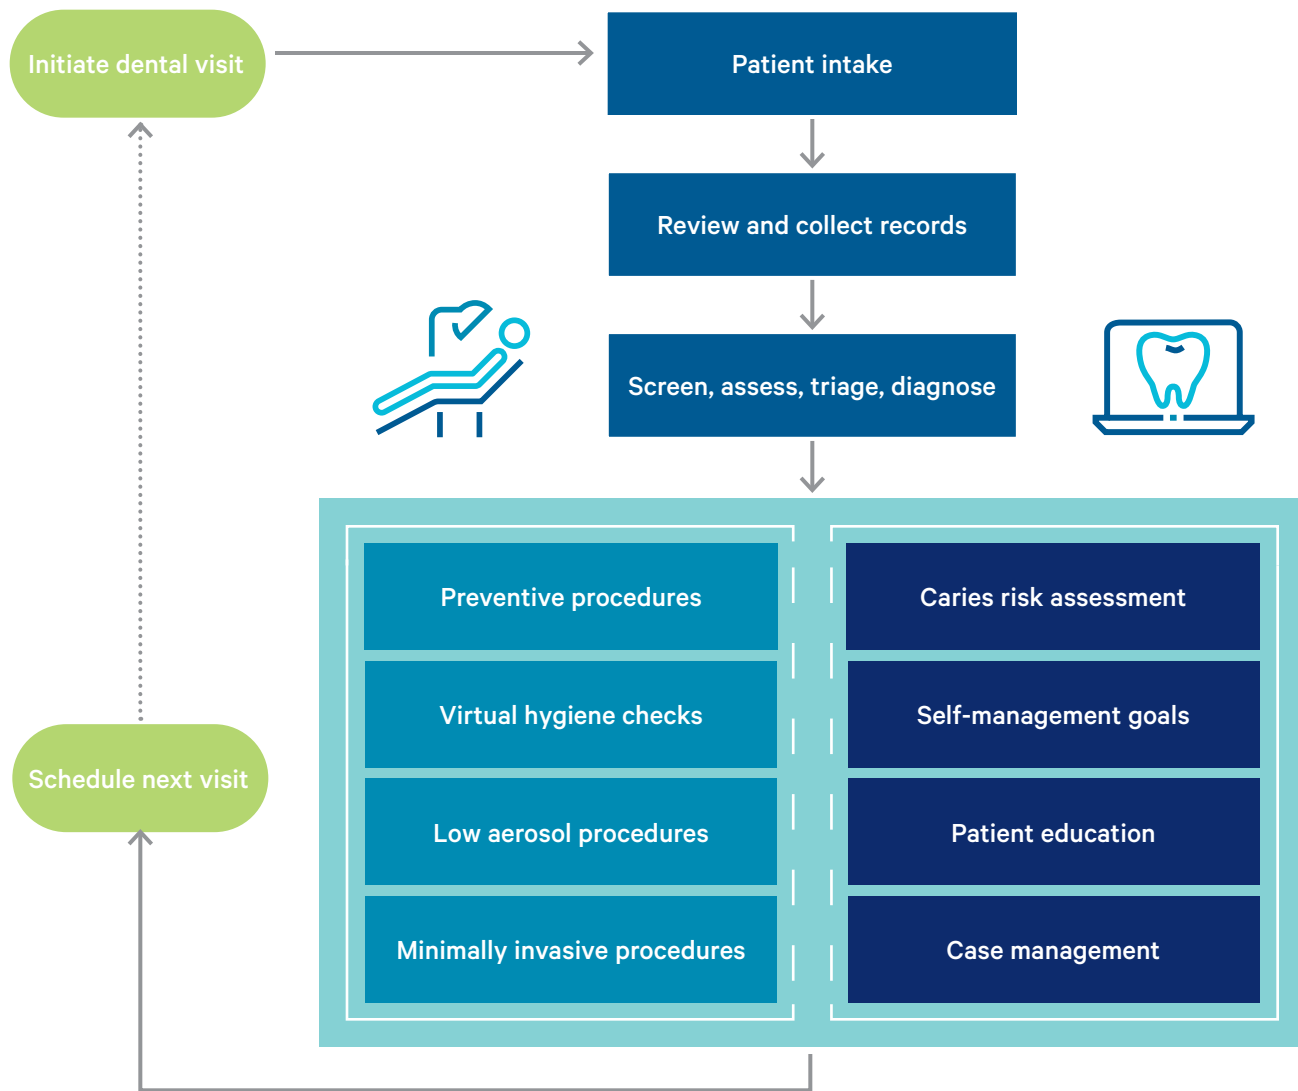

Groups generally performed tasks together  
(but open dashes to allow for flexibility)
